DETAILED ACTION

Allowable Subject Matter

1. Claims 1-27 are allowed.
2. The following is an examiner's statement of reasons for allowance:

Claims 1-27 are allowed because although the prior art taught a color wheel shifting device (gamut generator having at least two color settings in claim 21) and or method (see US 6,795,140 to Shigeta), it did not teach a microprocessor/method for detecting and storing in memory the amount of time that at least one color wheel (at least one color setting) is disposed in the engaged position (a particular color setting/color wheel is actively affecting the light beam). It is well known in the art to monitor the life of certain components such as arc lamps (see for example US 6,362,573 to Helbing et al.), however this is because arc lamps fail after a specific amount of time and by recording the amount of time they are lit, a microprocessor can predict when a user needs to replace the lamp; the prior art does not teach such a need for color wheels and color filters and accordingly it would not be obvious to take the teaching of recording the amount of time the arc lamp is used and apply it to a teaching of using multiple color wheels. Since the prior art did not teach the claimed invention and the only reason to modify the prior art shifting devices is hindsight; claims 1-27 are allowed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure:

US 3,600,076 to Edward Synder teaches in figure 1 a device which utilizes multiple color wheels which can be moved in and out of the light beam.

US 2003/0231260 to Pate et al. teaches changing the color gamut.

US 2004/0080717 to Pate which teaches recording the length of time a high temperature component operates, which could be understood to possibly include a color wheel. However Pate has a common assignee with the current application and since it only qualifies under 35 USC 102e and would have to be used in an obviousness type rejection, it does not qualify as prior art.
